1.0 INTRODUCTION

The Douglas Aircraft Company (DAC) C-6 Facility is located at 19503 South Normandie Avenue, Torrance, California (Figure 1). Quarterly groundwater sampling is being conducted in response to the California Regional Water Quality Control Board - Los Angeles Region correspondence to DAC, dated 7 April 1992. This report summarizes laboratory analytical data generated through the chemical analysis of groundwater samples collected 17, 18, and 19 December, Fourth Quarter 1996.

2.0 QUARTERLY MONITORING PROGRAM

Fourth Quarter 1996 groundwater sampling was performed in accordance with standard sampling procedures. Static water level depths were measured on 17 December 1996 prior to initiating purging of groundwater from any observation well. Static water depths in monitoring wells (MW-8, MW-9, MW-18 and MW-19) located in the southern portion of the DAC property installed for the Montrose Chemical Corporation Remedial Investigation were not measured for this quarter. Well WCC-10S was either covered or destroyed as the result of demolition activities on site, and was not measured or sampled.

Groundwater samples were collected from the following fifteen wells (Figure 2) and chemically analyzed for volatile organic compounds (VOCs) by EPA Method 8240/8260 for the Fourth Quarter 1996.

WCC-1S, WCC-2S, WCC-3S, WCC-4S, WCC-5S, WCC-6S, WCC-7S, WCC-8S, WCC-9S, WCC-11S, WCC-12S, WCC-1D, WCC-3D, and DAC-P1.

Table 1 summarizes observation well construction details. Tables 2 and 3 summarize the results of chemical analysis of groundwater samples and duplicates for major and minor constituents at the C-6 facility, respectively. Chemicals detected in samples from each observation well are shown in Figure 3. Table 4 summarizes available measured groundwater elevations to date. Estimated groundwater elevation contours for the Third Quarter are presented in Figure 4. Historical chemical concentration profiles for the indicator chemicals trichloroethene and 1,1-dichloroethene are shown in Figure 5. Copies of laboratory data sheets, laboratory/field Quality Control data sheets, groundwater purge and sample forms, and Chain-of-Custody records are included in Appendices A, B, C, and D respectively.

2.1 Groundwater Sampling Procedures

Prior to collecting groundwater samples from each well, groundwater was purged using an electrical submersible pump that was temporarily installed in the observation well. After lowering the pump to the approximate mid-point of the saturated well screen, approximately three to five wetted casing volumes of groundwater were purged from the well until the following groundwater monitoring parameters had stabilized to within 10% of preceding values: pH, electrical conductivity, and temperature. Purged groundwater was stored onsite in DOT approved 55 gallon barrels pending the results of laboratory analysis of samples.

Following groundwater purging, the flow rate of the submersible pump was reduced to 200 milliliters/minute. To collect a representative groundwater sample, the pump intake valve was positioned at the approximate mid-point of the saturated well screen interval. The recovered water was discharged into three labeled 40-ml capacity vials, preserved with HCl.

2.2 Field QA/QC Procedures

Duplicate groundwater samples were collected for the sampling round on 18 and 19 December 1996 for quality control purposes. The duplicates were collected in three HCl-preserved vials and identified by inserting the collection date after "DW-" (DW-121896 and DW-121996). No further sample identification was provided to the laboratory. Duplicate samples were taken on 18 and 19 December from observation wells WCC-1S and WCC-6S, respectively.

Following decontamination of the submersible pump, and prior to collection of groundwater samples from the successive well, an equipment rinsate blank was prepared for laboratory analysis. The equipment rinsate blank was prepared by pouring Reagent Grade II water, prepared by the analytical laboratory, over the pump and collecting the rinsate in two 40-ml vials preserved with HCl. The blank was identified following a similar protocol to that used for duplicate water samples and is identified as "EB" followed by the date. EB121996 was collected after sampling well DAC-P1. A trip blank was also analyzed for sampling and shipping activities and was identified as TB-121896.

All groundwater, duplicate, and field blank samples were transported in ice-cooled chests to Quanterra Environmental Services, Santa Ana, California using U.S. EPA-recommended Chain-of-Custody procedures.

3.0 EVALUATION OF ANALYTICAL RESULTS

3.1 Groundwater Gradient

Groundwater levels were measured prior to sampling on 17 December 1996 (Table 4 and Appendix C). The shallow zone groundwater elevations measured for this quarter ranged from 14.34 feet below mean sea level (MSL) to 15.64 feet below MSL, reflecting a rise in groundwater elevations of about 0.30 feet since the last quarter. An estimated potentiometric surface map for the shallow zone as measured on this day is presented as Figure 4. The groundwater gradient in the shallow zone was generally east to east-southeast with a southerly directed trough-like depression between observation wells WCC-12S and WCC-7S.

Insufficient data (two wells) are available to define the groundwater gradient in the deeper zone. Groundwater elevations in the two wells (WCC-1D and WCC-3D) were approximately 15.34 and 15.21 feet below MSL, respectively.

3.2 Analytical Data

The results of chemical analysis of groundwater and duplicate samples are summarized in Tables 2 and 3. Table 2 lists major constituents and Table 3 lists additional minor constituents of samples tested. The duplicate groundwater samples are indicated by an asterisk and are presented with the "original" groundwater samples. These tables include cumulative analytical data for all monitoring wells and detection limits (where available) for the listed chemicals.

The following observations are noted:

- Data for groundwater samples collected from well DAC-P1, located at the upgradient property boundary, indicate a TCE concentration of 15,000 micrograms per liter ($\mu\text{g}/\text{L}$) coming onto DAC's property (Figure 3). Toluene was also detected in well DAC-P1 at 610 $\mu\text{g}/\text{L}$. The concentrations of these chemicals were within historical ranges. DAC-P1 is screened in the shallow zone.
- Background concentrations of TCE and 1,1-DCE increased in the shallow zone upgradient or cross gradient wells WCC-2S and WCC-11S. Both contaminants are within historical ranges at concentrations of 120 to 170 $\mu\text{g}/\text{L}$ of TCE and 28 to 30 $\mu\text{g}/\text{L}$ of 1,1-DCE.
- Groundwater elevation data (Figure 4) and chemical concentration data (Figure 3) indicate that chemical transport in the shallow zone is generally in a southerly and southeasterly direction in the vicinity of buildings 36 and 41. Most chemical concentration data from the eastern boundary observation wells (WCC-5S, and WCC-9S) are within the same range or lower than upgradient or cross gradient "background level" wells (WCC-2S and WCC-11S).
- In general, variances of the other chemical concentrations since the last sampling remain within typical historical ranges.
- Low concentrations of 1-methylethylbenzene (MEB) were detected in samples collected from wells WCC-5S, WCC-9S, WCC-1D, and WCC-3D at 2.0, 1.5, 1.2, and 1.1 $\mu\text{g}/\text{L}$, respectively.
- Analytical data from the equipment rinsate blank, sample duplicates, trip blank, and laboratory spikes and duplicates are indicative of reliable data.

Notes: ug/l = micrograms per liter

1,1-DCE = Dichloroethene

1,1-DCA = Dichloroethane

1,1,1-TCA = 1,1,1-Trichloroethane

TCE = Trichloroethene

MIBK = Methyl isobutyl ketone

cis-1,2-DCE = cis-1,2-Dichloroethene

trans-1,2-DCE = trans-1,2-Dichloroethene

MEK = Methyl ethyl ketone

Notes:

1. Reference point is north side, top of well casing
2. Reference point elevation measured by Hargis + Associates, Inc.
3. Water Level Elevation not measured due to wellhead obstructions.
4. Well WCC-6S could not be opened on 20 September 1995. The water level elevation shown was measured on 6 September 1995.
5. Installed by Hargis + Associates, Inc. for Montrose Chemical Corporation
6. NA - Not Available

KENNEDY/JENKS CONSULTANTS
2151 MICHELSON DRIVE, SUITE 100
IRVINE, CA 92715
ATTN: MR. RUS PURCELL

LIMS NO.: 123721-0001/0012
DATE SAMPLED: 17/18-DEC-1996
DATE SAMPLE REC'D: 18-DEC-1996
PROJECT: McDONNELL DOUGLAS GROUNDWATER

Enclosed with this letter is the report containing the analytical results for the project specified above.

The Narrative section included in the following attachment provides a detailed description of all events that occurred during sample processing, analysis, and data review as applicable to the samples and analytical methods requested.

Report data sheets contain a list of the requested constituents measured in each test, the analytical results, and the standard reporting limits (RLs). Reporting limits are adjusted to reflect any dilution or dry weight correction, when applicable. Also provided in this report are the LIMS Report Key and the terms and abbreviations commonly used in our reports.

Preliminary data were provided on December 31, 1996 at 12:10 P.M. to Jay Knight.

The report shall not be reproduced except in full, without the written approval of the laboratory.

If you have any questions regarding the data provided in this report, please call Pat Abe at (714) 258-8610. Release of this report has been authorized by the Lab Director or the designee as demonstrated by the following signature.

Sincerely,

A handwritten signature in black ink, appearing to read "Pat Abe". It is written in a cursive style with a long, sweeping line extending from the left.

LIMS REPORT KEY

Environmental
Services

Section	Description
Cover letter	Signature page, report narrative as applicable.
Sample Description Information	Tabulated cross-reference between the Lab ID and Client ID, including matrix, date and time sampled and the date received for all samples in the project.
Sample Analysis Results Sheets	Lists sample results, test components, reporting limits, dates prepared and analyzed and any data qualifiers. Pages are organized by test.
QC Lot Assignment Report	Cross-reference between lab IDs and applicable QC batches (DCS, LCS, SCS, Blank, MS/SD, DU)
Duplicate Control Sample Report	Percent recovery and RPD results, with acceptance limits, for the laboratory Duplicate Control Samples for each test are tabulated in this report. These are measures of accuracy and precision for each test.
Laboratory Control Sample Report	Percent recovery results for a single Laboratory Control Sample (if applicable) are tabulated in this report, with the applicable acceptance limits for each test.
Matrix Spike/Matrix Spike Duplicate Report	Percent recovery and RPD results for matrix-specific QC samples and acceptance limits, where applicable. This report can be used to assess matrix effects on an analysis.
Single Control Sample Report	A tabulation of the surrogate recoveries for the blank for organic analyses.
Method Blank Report	A summary of the results of the analysis of the method blank for each test.

List of Abbreviations and Terms

DCS	Duplicate Control Sample	MSD	Matrix Spike Duplicate
DU	Sample Duplicate	QC Run	Preparation batch
EB	Equipment Blank	QC Category	LIMS QC Category
FB	Field Blank	QC Lot	DCS batch
FD	Field Duplicate	ND	Not Detected at the reporting limit expressed
IDL	Instrument Detection Limit	QC Matrix	Matrix of the laboratory control sample (s)
LCS	Laboratory Control Sample	RL	Reporting Limit
MB	Method Blank	QC	Quality Control
MDL	Method Detection Limit	SA	Sample
MS	Matrix Spike	SD	See MSD
RPD	Relative Percent Difference	TB	Trip Blank
ppm (parts-per-million)	mg/L or mg/kg	ppb (parts-per-billion)	$\mu\text{g}/\text{L}$ or $\mu\text{g}/\text{kg}$
QUAL	Qualifier flag	DIL	Dilution Factor

Refer to the Quanterra Incorporated Quality Assurance Management Plan for detailed explanations of terms summarized above.

TABLE OF CONTENTS

LIMS # 123721

Table of Contents	3
Narrative	4
Chain-of-Custody Records and Sample Description Information	
Analytical Results Summary (LIMS Report)	
A. LIMS Datasheets	
B. QC Summaries	

CASE NARRATIVE

LIMS # 123721

I. CONDITION UPON RECEIPT

The samples were not received in intact. The temperature of the cooler was 3.5°C

Sample containers were received intact. The VOA vials did not contain headspace. Sample container label did agree with the COC as to sample ID, collection date/time, and requested tests.

Samples were received in time to meet the method holding time specifications.

II. ORGANIC ANALYSES (BY METHOD: SW8260)

HOLDING TIME

All samples were prepared and analyzed within the method-specified holding time requirements.

METHOD BLANK

All method blanks met method- and/or project-specific QC criteria.

MS/MSD/LCS/DCS AND RPDs

All spike recovery and RPD data met method- and/or project-specific QC criteria.

MS/MSD recoveries for trichloroethene in MS Run 27 DEC 96-AC could not be calculated due to high constituent levels in the sample.

SURROGATE RECOVERIES

All surrogate spike recoveries in samples and in QC samples met method- and/or project-specific QC criteria.

CALIBRATIONS

All calibrations and calibration verifications met method- and/or project-specific QC criteria.

IRVINE, CA 92715
ATTN: MR. RUS PURCELL

LIMS NO.: 123741-0001/0006
DATE SAMPLED: 19-DEC-1996
DATE SAMPLE REC'D: 19-DEC-1996
PROJECT: McDONNELL DOUGLAS GROUNDWATER

Enclosed with this letter is the report containing the analytical results for the project specified above.

The Narrative section included in the following attachment provides a detailed description of all events that occurred during sample processing, analysis, and data review as applicable to the samples and analytical methods requested.

Report data sheets contain a list of the requested constituents measured in each test, the analytical results, and the standard reporting limits (RLs). Reporting limits are adjusted to reflect any dilution or dry weight correction, when applicable. Also provided in this report are the LIMS Report Key and the terms and abbreviations commonly used in our reports.

Preliminary data were provided on January 2, 1997 at 4:05 P.M. to Jay Knight.

The report shall not be reproduced except in full, without the written approval of the laboratory.

If you have any questions regarding the data provided in this report, please call Pat Abe at (714) 258-8610. Release of this report has been authorized by the Lab Director or the designee as demonstrated by the following signature.

Sincerely,

A handwritten signature in black ink, appearing to read "Pat Abe". It is written in a cursive style with a long horizontal line extending to the right.

LIMS REPORT KEY

Environmental
Services

Section	Description
Cover letter	Signature page, report narrative as applicable.
Sample Description Information	Tabulated cross-reference between the Lab ID and Client ID, including matrix, date and time sampled and the date received for all samples in the project.
Sample Analysis Results Sheets	Lists sample results, test components, reporting limits, dates prepared and analyzed and any data qualifiers. Pages are organized by test.
QC Lot Assignment Report	Cross-reference between lab IDs and applicable QC batches (DCS, LCS, SCS, Blank, MS/SD, DU)
Duplicate Control Sample Report	Percent recovery and RPD results, with acceptance limits, for the laboratory Duplicate Control Samples for each test are tabulated in this report. These are measures of accuracy and precision for each test.
Laboratory Control Sample Report	Percent recovery results for a single Laboratory Control Sample (if applicable) are tabulated in this report, with the applicable acceptance limits for each test.
Matrix Spike/Matrix Spike Duplicate Report	Percent recovery and RPD results for matrix-specific QC samples and acceptance limits, where applicable. This report can be used to assess matrix effects on an analysis.
Single Control Sample Report	A tabulation of the surrogate recoveries for the blank for organic analyses.
Method Blank Report	A summary of the results of the analysis of the method blank for each test.

List of Abbreviations and Terms

DCS	Duplicate Control Sample	MSD	Matrix Spike Duplicate
DU	Sample Duplicate	QC Run	Preparation batch
EB	Equipment Blank	QC Category	LIMS QC Category
FB	Field Blank	QC Lot	DCS batch
FD	Field Duplicate	ND	Not Detected at the reporting limit expressed
IDL	Instrument Detection Limit	QC Matrix	Matrix of the laboratory control sample (s)
LCS	Laboratory Control Sample	RL	Reporting Limit
MB	Method Blank	QC	Quality Control
MDL	Method Detection Limit	SA	Sample
MS	Matrix Spike	SD	See MSD
RPD	Relative Percent Difference	TB	Trip Blank
ppm (parts-per-million)	mg/L or mg/kg	ppb (parts-per-billion)	$\mu\text{g}/\text{L}$ or $\mu\text{g}/\text{kg}$
QUAL	Qualifier flag	DIL	Dilution Factor

Refer to the Quanterra Incorporated Quality Assurance Management Plan for detailed explanations of terms summarized above.

Chain-of-Custody Records and Sample Description Information	
Analytical Results Summary (LIMS Report)	
A. LIMS Datasheets	
B. QC Summaries	

CASE NARRATIVE

LIMS # 123741

I. CONDITION UPON RECEIPT

The samples were not received in intact. The temperature of the cooler was 3.5°C

Sample containers were received intact. The VOA vials did not contain headspace. Sample container label did agree with the COC as to sample ID, collection time/date, and requested tests.

Samples were received in time to meet the method holding time specifications.

II. ORGANIC ANALYSES (BY METHOD: SW8260)

HOLDING TIME

All samples were prepared and analyzed within the method-specified holding time requirements.

METHOD BLANK

All method blanks met method- and/or project-specific QC criteria.

MS/MSD/LCS/DCS AND RPDs

All spike recovery and RPD data met method- and/or project-specific QC criteria.

MS/MSD recoveries for 1,1-dichloroethene and toluene in MS Run 30 DEC 96-AD could not be calculated due to high constituent levels in the sample.

SURROGATE RECOVERIES

All surrogate spike recoveries in samples and in QC samples met method- and/or project-specific QC criteria.

CALIBRATIONS

All calibrations and calibration verifications met method- and/or project-specific QC criteria.

Work Report (Work done, Personnel/Equipment working)

800 Arrived at DAC. Demolition crews are removing buildings + other structures from north portion of property.

- Met with the foreman of demo activities + informed him that I would be on site purging + sampling wells.

Note: I cannot find WCC-105 in the parking lot + ~~WCC-25~~ the cover at WCC-25 has been broken but all other wells are in good shape + accessible.

915 Began measuring water levels in wells.

1130 Finished measuring wells + began setting up decor system. Also installed 200' of PVC hose onto reel.

1230 Left site to refill the propane tank for steam cleaner.

Distribution: Inspection File (orig)

Field File

By 

200 New Stine Road, Suite 115

FAX 805-831-5196

Job Title DACJob No. 944016.02Date 12/17/96Sheet 2

1350 Returned to site + began setting up to purge well # WCC-55.

1410 Began purging WCC-55 from 85' bgs.
Total purge will be 50 gal.

1450 Finished purge + collected sample # WCC55-17.

1500 Began demobbing for decon.

1522 Began setting up to purge + sample well # WCC-95.

1602 ~~Slow~~ Slowed Purge to about 200 ml/min for sample collection + collected sample # WCC95-17.
Began pulling equipment from well.

1620 Began deconning equipment.

1640 Burner on steamcleaner will not light

Began loading equipment into truck to leave site.

1710 LEFT site.

Note: Decon system is; two new poly tanks for soapy then fresh water internal rinse + a plastic wash pad for external steamclean

Work Report (Work done, Personnel/Equipment working)

750 Arrived at DAC. Set up down haul + began steamcleaning pump, hose + depth sounder.
- Thermocoupler in steamcleaner is cracked + is very difficult to heat up.

850 Began setting up to purge + sample well # WCC-1D.

922 Began purging WCC-1D from about 80' bgs.
This well is 135' deep + total purge is 134 gal.

1045 Purged + sampled well # WCC-2S.
Well lid was lost during clean up of surrounding buildings. The well is OK.

1152 Purged + sampled well # WCC-11S

1250 Purged + sampled well # WCC-12S

Distribution: Inspection File (orig)

Work Report (Work done, Personnel/Equipment working)

730 ~~800~~ Arrived on site. Filled decon wash barrels, filled steamcleaner, water tank + deconval equipment.

800 Began purge well # WCC-3D. This is the deepest well on site with a total purge of 138 gal.
This well also recovers slowly (approx 1-2 gal. min.).
936 Collected sample # WCC3D-17.

1018 Began purge on well # WCC-3S. This well has a strong odor.

1036 Collected sample # WCC3S-17.

1107 Began purge on WCC-6S. This well also has a very strong odor.

1125 Collected sample # WCC6S-17 + Duplicate sample DW - 121996.

Distribution: Inspection File (orig)

By Shane Jenks

Job Title DACJob No. 944016.02Date 12/19/96Sheet 2 of 2

- 1222 Began purging well # DAC-PI. Purged from 88' because of low recovery rate.
- 1234 Pump overheated + stopped. Allowed pump to cool before resuming purge.
- 1240 Resumed purge.
- 1250 Slowed purge rate to 200 ml/min + collected sample # DACPI-17.

After pulling equipment from well I decont'd for the last time + collected a rinsate blank sample by pouring clean water (lab prepared) over the clean pump + collecting rinsate in 3- VOA's.

1310 Collected EB-121896.

1335 Demobilized decon system + left site.

- Generated 1 rinsate drum in addition to purge drums.
